KAP

ENGINEERING

KAP Intro

Founder and owner of KAP Engineering, Paul Smith, started out as an engineering apprentice with Tiverton Poultry in 1980. An uninterrupted 20 year period with the company, gaining huge knowledge and experience working within the poultry environment.

To further his career and fulfill a lifelong ambition to run his own company, Paul left Devon Crest (Tiverton Poultry that was) in 2000 to launch KAP Engineering. Amongst his first customers were interestingly enough, Devon Crest, who were obviously well aware of what Paul could offer. During those early years Crediton Poultry also soon became a regular client, as did Broad Oak Toiletries.

Due to heavy demand it wasn't long before extra resources were necessary, more fabricators and engineers were introduced and the team started to expand.

Recent times has seen many large companies introduced to the KAP Engineering portfolio. Lloyd Maunder, Flixton and amongst a whole host of other established clients; Interfish in Plymouth (recommendation from Sainsburys, due to connections with Lloyd Maunder).

Moving forwards the company is fully committed to further enhance and expand its skill base in order to continue to develop what is already an impressive portfolio of clients.

Just a short email vouching for the excellent service provided by Kap engineering on the project we put in to harvest internal organs; I found Paul and his team extremely supportive and integrated very successfully with other teams who were involved in the project, they were flexible, approachable, inexpensive and their after care service was second to none. On several occasions, due to manufacturing problems with the installed kit, Paul and his team were able to problem solve and even improve.

I would not hesitate to involve Kap Engineering again in projects at Willand or at any other sites under my remit.

Matthew Bartram (Project Manager) - Amber Foods Ltd

KAP Engineering, under the management of Mr. Paul Smith, has undertaken various works to a satisfactory standard for me at three different factories.

Devon Crest

Supply of shift cover, general stainless and mild steel fabrication; The installation of a 6" mild steel line for blowing feathers and numerous 4" vacuum lines and services. They were also involved in the removal and replacement of a complete evisceration line over a week-end period working under the instruction of the Meyn engineers.

Flixton

To supply shift cover for general repair and breakdown work; Removal and replacement of approx 900mtrs of air and water services in the roof voids and other general fabrication work.

Willand factory

Supply shift cover, general repairs and breakdown work. Assist with week-end installation work and to supply and install new stainless steel support beams manufactured to Meyn Drawings, assist with on site modifications during the install of the offal recovery system. Numerous fabrication works such as machinery guards, stainless steel door frames and new sub frames for production machinery.

Mr. D. Morrish (Engineering Manager) - 2sisters Food Group

As Managing Director of The Crediton Poultry Company Limited, I used KAP Engineering for a number of projects at the Crediton plant over a number of years.

In that time they manufactured and installed a number of pieces of equipment in the slaughtering and cooking plants. All of these jobs were completed on time and to an extremely high standard.

In addition, KAP undertook regular maintenance activities to assist in the smooth running of the plant. Again the work was of a very high standard.

KAP have a wide experience in the Poultry Industry and, using that knowledge, are able to handle a variety of projects in a professional, effective manner.

Andrew M. Bryant - Crediton Poultry Company Ltd

I am the General Manager of 2 Sisters Food Group at Willand and over the last 3 years we have used KAP Engineering on a regular basis around the site. I have to say that the attitude and commitment to work is exemplary. We have used their services on refitting certain areas of the production facility and also to help with cover on shift working. At all times the quality and standard of work has been excellent and I would have no hesitation in recommending their services.

Geoff Pugsley - General Manager - 2 Sisters Food Group

KAP Conveyors

Custom-built, bespoke conveyors as well as multi-functional automated conveyor systems, let us streamline your production, ensuring a smooth, efficient process requiring fewer staff and minimising the instances of human error.

Using stainless steel when manufacturing our food conveyor and depending on your requirements, we can deliver them with flat belts, modular belts or slat belts.

Food Conveyor Handling in the UK

Custom-built, bespoke conveyors, as well as multi-functional automated food conveyor systems. Hygiene and sanitation are optimum in the food industry which is why our **food conveyors** are fabricated in stainless steel and food grade belting.

We have provided food conveyors for many industries including dairy, bakery, snacks, pre packed foods, poultry and confectionary.

Our Food Conveyor System will comply with your sanitation requirements custom built for you.

Installation of our conveyors will have the minimum of down time and the process will be as stress free as possible.

Stainless Steel Conveyors for Hygiene

If you want a **Stainless Steel Conveying**, look no further! We can provide you with a top-notch stainless steel conveyor at an honest, down to earth price! Try out our products and we are sure you will be satisfied with the results! So why not try us out now for a complete stainless steel conveyor system.

Belt Conveyor Systems

The most commonly used conveying solution.

Whatever your requirements we are here to help analyse your needs.

KAP Platforms

Steel platforms & access solutions built and installed to customer's specification. All KAP platforms and access solutions are designed and manufactured specifically for the area and environment for which they are to be used in, we offer a range of materials and finishes.

Access Solutions

All our ladders are designed and manufactured specifically for the area and environment for which they are to be used in, we offer a range of materials and finishes.

Barriers & Handrails

Handrails and barriers are designed and fabricated to fulfil your exact requirements, from light duty pedestrian handrails to heavy duty barriers.

Staircase & Platforms

We design platforms and stairways for a large range of loads, traffic and environment, we therefore offer platforms and stairways in many different materials and designs.

Trolleys

We design and fabricate trolleys of all shapes and sizes from Heavy Duty Stillages to suit particular load applications, down to mobile computer cabinets. We only ever use the highest quality castors and wheels.

KAP Walkways

KAP Engineering are specialist manufacturers and installers of industry specific railings, barriers, perimeter protection, fall prevention and many other applications. Manufactured specifically to meet the clients individual requirements.

Guardrails

Inline railings, handrails and guardrails supplied for any industry. Offer protection for loading bays, safety barriers in dangerous environments or the securing of road bridges and culverts.

Walkways & Flooring Systems

Walkways and flooring systems using standard or custom fabricated components to meet your requirements.

Components

We are able to access a wide variety of standard components including

- handrail sticks, standards, tubes, bends, gates, hinges balls and bases
- pipeclamps, weld elbows, fixing clips

Our team will manage each stage of your project and we are committed to providing you with a quality personal service that will exceed your expectations. Please give us a call if you would like to discuss a project or require technical information or advice.

KAP Drainage

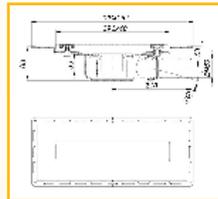

With a wealth of knowledge in the stainless steel drainage industry, we provide a comprehensive range of additional applications, predominantly to food production companies requiring reliable, hygienic and well made stainless steel drainage systems and related products.

We undertake the design, fabrication and installation of stainless steel drains and channels, drain filters, stainless steel drain covers, manholes, steel kerbing, bollards and bump rails to name a few.

Whether a singular industrial unit, or an entire company's premises, we have both the experience and the team of dedicated engineers to facilitate the installation and repair of varying system sizes at a competitive rate.

At KAP Engineering, we work closely with all clients, addressing their individual drainage and channel systems requirements, designing, fabricating and installing a bespoke application that functions efficiently within the environment it was designed for.

KAP General

We have over 30 years of experience working in and around the food industry, including planned maintenance, machine renovations and installations.

Our skilled craftsmen have the experience and knowledge to undertake many other metal fabrication projects.

Machine Installations on and off site

Tig and Mig welding on site and in our workshops

Planned Maintenance to suit the Factory's needs

Machine Overhauls

Factory Renovations

Stainless Pipe Welding

Wrought Iron Fencing

Specialist Signage

We are no ordinary signage company, always looking for a unique stand-out concept that has sometimes challenged the KAP team to the full.

Paul and the team have delivered on quality every time. Thanks for your support over the years.
